4th Quarter 2009
Status Report

Summary

During the period between August 1, 2009 through December 31, 2009, investigations and construction at the Kilby Ditch area at the Coliseum Boulevard Plume (CBP) site continued.

Annual monitoring of selected groundwater monitoring wells and continuous multi-channel tubing (CMT) wells, and surface water in the Kilby Ditch and the “Low-Lying Areas” was conducted in October 2009 in accordance with the approved plans and is summarized in Section I. This report contains results of samples collected for the October 2009 Sampling Event.

Section II contains information about treatment of purge water generated during this period.

Section III contains a summary of quality assurance/quality control (QA/QC) samples collected during this period.

Section IV contains results of the samples collected during the Kilby Ditch Construction Project through December 2009.

I. Routine Monitoring

Water Level Measurements

September 28 through September 30, 2009: Depths to ground water were measured in piezometers, monitoring wells, and pump test wells associated with the Coliseum Boulevard Plume Investigation. Groundwater elevations are provided in Tables 1a through 1f. Groundwater elevation contours for the 100 and 200 series "shallow zone" monitoring wells and piezometers are shown on Figures 1 and 2, respectively.

Depths to ground water that were measured during sampling September 28-30, 2009 in continuous multi-channel tubing (CMT) wells 1 through 4 are reported in Table 2. CMTs 1-7, 2-5, 3-1, 3-7, 4-1 and 4-7 were dry for this event. CMT wells 5 and 6 were not monitored in this quarterly event.

Quarterly Sampling Event (Modification to Addendum 13 Work Plan)

A quarterly sampling event was conducted in accordance with the Modification to Addendum 13 – Ground Water Monitoring Plan (dated March 17, 2005). This quarterly event was conducted in October 2009.

The following 112 wells were included in this quarterly monitoring event.

MW-1A	MW-106	MW-215	MW-129	MW-136A	MW-146A	MW-154	MW-357
MW-2A	MW-206	MW-116	MW-229	MW-236B	MW-246B	MW-155	MW-457
MW-3A	MW-107	MW-216	MW-130	MW-236C	MW-147A	MW-156	PZ-18
MW-5A	MW-207	MW-117	MW-230	MW-137A	MW-247B	MW-158	PZ-19
MW-101	MW-108	MW-217	MW-131	MW-237B	MW-149A	MW-259	PZ-20
MW-201	MW-208	MW-221	MW-231	MW-237C	MW-249B	MW-260	PZ-21
MW-102	MW-109	MW-221C	MW-132	MW-138A	MW-249C	MW-261	PW-5
MW-202	MW-209	MW-123	MW-232	MW-238B	MW-150A	MW-262	
MW-103	MW-210	MW-223	MW-133	MW-238C	MW-250B	MW-263	
MW-203	MW-111	MW-124	MW-233	MW-143A	MW-250C	MW-264	
MW-104	MW-211	MW-224	MW-134	MW-243B	MW-151A	MW-265	
MW-204	MW-311	MW-125	MW-234	MW-144A	MW-251B	MW-339	
MW-304	MW-113	MW-225	MW-135A	MW-244B	MW-152A	MW-340	
MW-105	MW-213	MW-128	MW-235B	MW-244C	MW-252B	MW-341	
MW-205	MW-115	MW-228	MW-235C	MW-145A	MW-153	MW-342	

Prior to sample collection, the monitoring wells were purged using a bladder or peristaltic pump until field parameters (pH, conductivity, and turbidity) stabilized. Temperature and redox (ORP) were also measured in the field. The field data sheets are attached.

The samples collected from the monitoring wells were analyzed for VOCs by EPA Method 8260. The concentrations of selected VOCs in groundwater samples collected from the monitoring wells are shown on Plate 1. All detected VOCs are shown in Table 3.

Quarterly Sampling of the Continuous Multi-Channel Tubing (CMT) Wells

October 7 - 10, 2009: Groundwater samples were collected from CMT wells 1, 2, 3 and 4. Samples were not collected for CMTs 1-6, 1-7, 2-5, 3-1, 3-7, 4-1 and 4-7 due to insufficient water / recharge in the CMT ports. CMT wells 5 and 6 were not monitored in this quarterly event.

After measuring the depth to water, each CMT port was purged using a peristaltic pump until field parameters (pH, conductivity, and turbidity) stabilized or three (3) well volumes were measured. Temperature and oxidation-reduction potential [redox (ORP)] were also measured in the field.

During sample collection, the tubing from the pump was disconnected and withdrawn from the port. The water samples were collected by draining the water from the bottom end of the tubing (end previously inside the port) into the sample containers. The groundwater samples were analyzed for VOCs.

Results of VOCs collected from the CMT wells are provided in Table 6. Laboratory reports for these analyses and copies of the Monitoring Well Sample Forms are attached.

The locations of the CMT wells and the results are shown on Figure 3.

Surface Water Sampling

Samples were not collected from routine locations within the Kilby Ditch this quarter because of the construction at the Kilby Ditch. The construction is being conducted under the approved CMIP and sample results reported in Section IV.

October 13, 2009: Surface water samples were collected on October 13, 2009 from the Zoo Ditch at one location (ZD-1) and the Zoo Pond at one location (ZP-1). The surface water samples were collected from the central part of the zoo ditch and from the pump intake location at the Zoo Pond.

Figure 4 shows the locations of both sampling points.

The water samples were placed on ice and transported to the laboratory for analyses of VOCs. Results of VOCs are provided in Table 7. The laboratory reports for the VOC analyses of the surface water samples are attached.

The sample collected at the Zoo Ditch (ZD-1) contained chloroform at a concentration of 1.1 ug/l. No TCE or other VOCs were detected in the sample collected from the Zoo Pond sampling location (ZP-1).

At each sample location, the water samples were also measured for temperature, pH, dissolved oxygen (DO), specific conductance, and turbidity. Results of these measurements are provided in Table 8.

Low – Lying Areas (Addendum 04 Work Plan)

October 7, 20 & 22, 2009: Soil/sediment and surface water samples were collected on October 7, 20 & 22, 2009 from locations A-H and N, O, and P in the "Low-Lying Areas." Results of the analyses for VOCs in soil / sediment samples and surface water samples are provided in Tables 9 and 10, respectively. Samples could not be collected from locations I-M due to the construction in the Lower Kilby Area.

Trichloroethylene was detected in two of the surface water sample locations in the low-lying areas. The TCE concentrations detected were: N (25.9 ug/L) and P (39.3 ug/L). Sample location O also had a concentration of cis-1,2-Dichloroethene at 2.1 ug/L as well as a concentration of toluene at 1.6 ug/L. Laboratory reports of these analyses are attached.

There were no VOC's detected in any of the sediment samples taken.

II. Investigation Derived Waste

Water Treatment

October 2009: Water accumulated during decontamination of sampling equipment, and purging and sampling of groundwater monitoring wells during the October monitoring event was stored in a plastic 1,200 gallon above-ground tank at the wastewater treatment system on Coliseum Boulevard near the West Kilby Ditch.

The date(s) and volume(s) for discharge of treated purge water are shown below.

Discharge Date	Volume of Discharge (Gallons)	Purge Water (Influent)		Treated Effluent TCE (ug / l)
		TCE* (ug / l)	Cis-1,2-Dichloroethene (ug / l)	
11/9/2009	~ 1,100	8.0	3.6	< 1.0

The Montgomery WWSSB was provided the discharge date(s), volume(s) and monitoring data.

III. Quality Assurance/Quality Control

During the October 2009 quarterly groundwater sampling event, duplicate groundwater samples were collected from monitoring wells MW-1A, MW-101, MW-111, MW-216, MW-123, MW-228, MW-229, MW-130, MW-238C, MW-152A, MW-262, MW-339 and PW-5 and were analyzed for VOCs. No duplicate samples were taken from CMT wells during this sampling event. The duplicate sample results are shown with the parent sample results in Table 3.

There were no detected VOCs in equipment rinsate or trip blanks for this sampling event.

Continued monitoring in accordance with the approved monitoring plan is recommended.

IV. Kilby Ditch Construction Project

On August 24, 2009, McDonald Construction began work in the Kilby Ditch Area. The Corrective Measures Implementation Plan requires:

Upper Kilby Area

- Cover West Kilby Ditch and slope stabilization of the northern section of Main Kilby Ditch
- Retain or repostion security fencing along Main Kilby Ditch

Lower Kilby Area

- Construct a Wetland Treatment System and perimeter security fencing in the Low-lying Area

During construction in the Upper Kilby area, all saturated soil excavated was placed in dewatering containers until the soil passed a paint filter test. The volume of soil that was dewatered and results of paint filter test are shown in Table 11. A total of 2110.29 cubic yards of soil were dewatered. Water that was removed from the soil in the dewatering process was pumped into one of two pre-treatment frac tanks until the tank was full. Once full, the water in the tank was "batch treated" and placed into a frac tank for storage of "Treated" water until laboratory results were reviewed for authorization of discharge. At the beginning of the project, 2 pre-treatment samples from frac tanks, 2 samples from the "Ditch" and 2 samples from the culverts beneath Coliseum Boulevard ("Pipe") were collected to determine treatment requirements to meet the discharge limitations of 0.0035 mg/l TCE and 50 ntu Turbidity. Results of pre-treatment samples are in Table 12a. Treatment began on October 22, 2009 and results of "treated" water samples are in Table 12b. During the construction in the lower Kilby Area a total of 17 Batches of water were treated, totaling 303,100 gallons of water. See table 13.

Since the beginning of the project there have been 35.06 total inches of rainfall. See table 14. Areas within the Low-Lying Area are covered in water, which has delayed construction in those areas.

Notes:

[1] Feet above mean sea level

[2] Feet below land surface

[3] Water elevations are only measured in CMTs when samples are collected.

Notes:

[1] Samples were analyzed in accordance with Method 8260 outlined in Test Methods for Evaluating Solid Waste Physical/Chemical Methods , EPA, SW-846.

[2] MDL - Method Detection Limit of 1.0 microgram per liter (µg/L) for the laboratory analyses. Detection limits varied for some samples and are indicated in parentheses ( ).

[3] ND - Not Detected; Detection limits varied for some samples and are indicated in parentheses ( ). Compounds were not detected at an elevated detection level for the sample.

[4] J - Concentration below calibration curve but above detection limit. In July 2005, the definition of a "J" flag was modified to flag samples with concentrations below the practical quantitation level, rather than the calibration curve values.

[5] dup - Duplicate samples were collected for quality assurance/quality control purposes.

[6] Samples

[7] Ground-water samples collected from monitoring wells MW-103 and MW-203 may have been inadvertently switched in the field during the October 2004 sampling event.

[8] B - Compound of interest was found above the detection limit concentration in a laboratory blank sample

[9] Samples collected from monitoring wells MW-104 and MW-109 on October 6, 2003, were reanalyzed out of holding time.

[10] Corrected results - Constituent results for monitoring well MW-108 were inadvertently transposed in October 2002.

[11] NS - Not Sampled; Monitoring wells MW-122, MW-220 and MW-222 were abandoned on May 20, 2005 at the request of the Alabama Department of Environmental Management.

[12] Monitoring wells MW-131, MW-231 and MW-237C were initially sampled on April 7, 10, and 12, 2006, respectively. The wells were resampled for VOCs during the collection of samples for methane, ethane and ethene analyses on April 14 and 20, 2006.

[13] Ground-water samples collected from monitoring wells MW-138A and MW-238B may have been inadvertently switched in the field during the April 2006 sampling event.

[14] MW-143A, MW-144A, MW-244B, MW-244C, MW-145A, MW-146A, and MW-246B were initially sampled April 5-7. Samples were inadvertently not collected for inorganic (alkalinity, chloride, nitrate, nitrite, and sulfate) analyses. Wells resampled 04/9 and 04/11 2005.

[15] Monitoring well MW-145A was initially sampled on July 9, 2005, but a duplicate sample and a sample for total iron were not collected for analyses due to insufficent groundwater, therefore, the well was resampled on July 28, 2005.

[16] This monitoring well was not sampled because the well was dry or did not yield sufficient purge volume for sampling.

Table 6. Results of analyses of detected volatile organic compounds (VOCs)[1] in ground-water samples from Continuous Multi-Channel Tubing (CMT) wells; 4th Quarter 2009 Status Report; Coliseum Boulevard Plume Investigation; Montgomery, Alabama.

[Concentrations are expressed in micrograms per liter (µg/l)]

Notes:

[1] Samples were analyzed in accordance with Method 8260 outlined in Test Methods for Evaluating Solid Waste Physical/Chemical Methods, EPA, SW-846

[2] MDL - Method Detection Limit of 1.0 microgram per liter (µg/l) for the laboratory analyses. Detection limits varied for some samples and are indicated in parentheses ( ).

[3] ND - Not detected; Detection limits varied for some samples and are indicated in parentheses (). Compounds were not detected at an elevated detection level for the sample.

[4] J - Concentration below calibration curve but above detection limit. In July 2005, the definition of a "J" flag was modified to flag samples with concentrations below the practical quantitation level, rather than the calibration curve values.

[5] B - Compound of interest was found above the detection limit concentration in a laboratory sample

[6] NA - Not analyzed

[7] NS - Not Sampled. Port did not contain sufficient water for sample collection.

[5] Location SW-2, which has historically been a single sample from the dual pipes under Coliseum Boulevard, was sampled as two separate locations [SW-2A (north) and SW-B (south)] beginning August 22, 2001.

[6] J - Concentration below calibration curve but above detection limit. In July 2005, the definition of a "J" flag was modified to flag samples with concentrations below the practical quantitation level, rather than the calibration curve values.

[7] Monitoring point MP-1 is at midpoint of former sampling locations SW-2A and SW-2B.

[8] Surface water sampling was changed from monthly to quarterly sample collection in accordance with the Interim Corrective Measures Report dated September 2001, revised February and July 2002. Monthly sampling was conducted during the pipe rehabilitation project (January through April 2003).

Notes:

[1] All field parameters were measured with a YSI multi-parameter (556 MPS) meter.
[2] CP - Compliance Point; MP - Monitoring Point; ZD - Zoo Ditch location
[3] °C - Degrees Celsius
[4] µmhos - Micromhos
[5] s.u. - standard units
[6] mg/l - milligrams per liter
[7] ntu - nephelometric turbidity units
[8] NM - Not measured; Technician inadvertently did not measure the parameter.
[9] Field parameters were remeasured on 7/22/04, due to a misrecording of one of the field parameters by the field crew.
[10] Sample location MP-1 was the only location measured on August 9, 2004, to determine if there was an increasing concentration trend at location MP-1.
[*] NS = Not Sampled - equipment malfunction

Table 9. Concentrations of detected volatile organic compounds (VOCs)[1] in samples of sediment from the "Low-Lying Areas"; 4th Quarter 2009 Status Report; Coliseum Boulevard Plume Investigation; Montgomery, Alabama. [Distributions of VOCs in sediment/soil samples are shown on Figure 5.]

			Sediment Lab Results

Notes:

[1] Samples were analyzed in accordance with Method 8260 outlined in Test Methods for Evaluating Solid Waste Physical/Chemical Methods, EPA, SW-846.
[2] Methylene Chloride is considered to have been present in the laboratory during analysis of the samples.
[3] MDL - Method Detection Limit of 3.0 micrograms per kilogram (µg/kg) for the soil laboratory analyses
[4] J - Concentration below calibration curve but above detection limit. In July 2005, the definition of a "J" flag was modified to flag samples with concentrations below the practical quantitation level, rather than the calibration curve values.
[5] ND - Not Detected
[6] Results on September 17, 2002, are reported on "wet-weight" basis.
[7] dup - Duplicate sample collected for quality assurance/quality control purposes.
[8] Sediment samples collected on 1/14/03 were analyzed by STL Laboratories because **TTL**'s laboratory equipment malfunctioned. STL's method detection limits varied for some samples and are indicated in parentheses ( ).
[9] In the sediment sample collected at location O on January 29, 2004, low mass and low percent solids present in the sample possibly resulted in an ambiguous level of TCE; therefore another sample was collected on March 9, 2004.
[10] On April 14, 2004, location O was sampled for verification and delineation of TCE detected in the sediment samples collected on January 29 and March 9, 2004.

Notes:

[1] Samples were analyzed by **TTL, Inc**. in accordance with Method 8260 outlined in Test Methods for Evaluating Solid Waste Physical/Chemical Methods EPA, SW-846.

[2] Methylene Chloride is considered to have been present in the laboratory during analysis of the samples.

[3] MDL - Method Detection Limit of 1.0 microgram per liter (µg/l) for the aqueous laboratory analyses

[4] Concentration below calibration curve but above detection limit. In July 2005, the definition of a "J" flag was modified to flag samples with concentrations below the practical quantitation level, rather than the calibration curve values.

[5] ND - Not Detected

[6] dup - Duplicate sample collected for quality assurance/quality control purposes.

[7] NS - Not sampled; sample location was not sampled because of insufficient water for analyses

[8] NC - Not Collected; sampling location was not scheduled to be sampled.

[9] Sample location M was not located on 7/21/03, but was located and sampled on 7/29/03.

*[1] Retreated because close to turbidity limit

Table 13 Kilby Ditch Project; Batch Water Treatment Process, Discharge Summary

Month	Date	Batch Number	Discharge Volume (gal)	Total Discharge Volume (gal)
October	23	1T	15,700	36,700
	29	2T	21,000	
November	4	3T	21,000	172,000
	5	4T	21,000	
	6	5T	21,000	
	9	6T	10,000	
	12	7T	21,000	
	19	8T	15,000	
		9T	21,000	
	20	10T	21,000	
	24	11T	21,000	
December	1	12T	21,000	94,400
		13T	21,000	
	10	14T	21,000	
	17	15T	15,700	
	22	16T	NA*	
	30	16T re-test	15,700	
January 2010	6	17T	15,700	15,700

During the period October 23, 2009 – January 06, 2010 approximately 318,800 gallons of water were collected and treated.

* Batch 16T failed the turbidity test and was subsequently re-treated therefore there was no discharge on this date

Table 14 Kilby Ditch Project Rainfall

Kilby Ditch Project Rainfall	
August	6.5 inches
September	7.83 inches
October	5.55 inches
November	5.11 inches
December	10.07 inches
Total Rainfall:	35.06 inches

Notes: Base map is a composite of an initial base map compiled by Goodwyn, Mills & Cawood Environmental Consultants, Inc. and a June 16, 2000 map by Larry E. Speaks & Associates. The June 16, 2000 map of Larry Speaks & Associates was compiled from maps provided by TTL, Inc. and the Montgomery, Alabama Tax Assessor's Office.

Contaminants are listed in same order as well identification tables shown in Legend.

FIELD NOTES

SOUTHERN EARTH SCIENCES, Inc.

QUARTERLY GROUND WATER MONITORING WELL

ENVIROCHEM Environmental Laboratories

Project: ALDOT/Coliseum Blvd Plume

Well No: MW-132

Job No: 06-401 Personnel: KH

Date: 10.29.09

Sampling Method: ☒ Bladder Pump ☐ Peristaltic Pump ☐ Submersible Pump

Pump No.: ECII

Depth to Water, ft: 20.75	Total Well Depth, ft: 27.95	Calculated Well Vol: 1.2 gals/vol
Controller Settings: 10/15		Volume Purged, gal: 3.6 gals

Time	Temperature C°	Conductivity umhos/cm	pH	Turbidity ntu	DO mg/L	Redox mV	Remarks
1010	22.01	395	5.74	196.3	1.96	261.2	initial
1035	22.16	383	5.46	0.26	2.71	260.2
